

COMMUNICATION SKILL - Session 5

TONE AND VOLUME OF VOICE

Tone of Voice

Tone of voice is a crucial part of communication and is considered a form of nonverbal communication. It's how you speak, and it's made up of several factors, including your volume, pitch, pace, and inflection

Volume of Tone

Volume of Tone is considered a form of nonverbal communication because it can modify or contradict the words you say. It can convey meaning, emotions, and attitudes through pitch, volume, rate of speech, inflection, and emphasis. For example, the pitch of your voice can convey emotions like excitement, sadness, or anger.

Activity 1

- Step 1 Cut several strips of paper.
- Step 2 On each strip of paper, write down a mood or a disposition like guilty, happy, sad, suspicious, frightened, insulted, anxious or insecure.
- Step 3 Fold the strips of paper and put them into a bowl. They will be used as prompts.
- Step 4 Have each student take a prompt from the bowl and read the sentence: "We all need to gather our things and move to another building as soon as possible!" expressing the mood they've selected.
- Step 5 After each student has read their sentence, the other students should guess the emotion of the reader. Each student should write down assumptions they made about each "speaking" student as they read their prompts

The best expression will get a small gift

Home assignment

Start by humming a familiar tune, gradually increasing the volume and pitch. This exercise helps relax the vocal cords and improve resonance.

Parents should record this and send an acknowledgement of the same that the activity is completed in atleast 5 different volumes and pitches.

End of session
