

EFFECTIVE STUDY SKILLS - Session 5 and 6

Managing time effectively, making important points and memorization

Managing time effectively

- Figure out how you are currently spending time
- Create a daily schedule and stick with it (make a daily time table)
- Prioritize wisely (make whats easy to learn and complete faster as first priority). Make the children do this chart in their book.

Important	Urgent	Not Urgent
	DO	Decide

- Avoid the urge to multitask
- Assign time limits to tasks
- Eliminate distractions like phone, TV, music etc while doing the task.

Making important points and memorization

Understand First, Memorize Later

Before you start memorizing, make sure you understand the concept. When you truly grasp the concept, it is much easier to remember the details. Read through your lesson and try to explain it in your own words. If something does not make sense, do not hesitate to ask your teacher or a classmate for help. Understanding the “why” behind the facts will make memorizing easy

Break It Down into Chunks

Trying to memorize a huge chunk of information all at once can be daunting. Instead, break it down into smaller, manageable pieces. For example, if you have a long chapter to memorize, divide it into sections or paragraphs. Focus on one chunk at a time and master it before moving on to the next. This way, you will not feel overwhelmed, and your brain can better process the information.

Use Mnemonics

Mnemonics are like magic tricks for your memory! They help you remember information by associating it with something easier to recall. For example, if you need to remember the order of the planets (Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, Pluto), you can use the mnemonic **“My Very Educated Mother Just Served Us Noodles in Plate.”** or **“My Very Educated Mother Just Showed Us Nine Planets”**. Get creative and come up with your own mnemonics for different subjects.

Visualize with Mind Maps

Mind maps are a fantastic tool to visualize and organize information. Start with a central idea or topic and draw branches that represent different sections or key points. Use colours, images, and keywords to make your mind map more engaging. This visual representation helps your brain see the connections between different pieces of information, making it easier to recall them later.

Create Flashcards

Flashcards are a classic and effective study tool. Write a question or a key term on one side of a card and the answer or definition on the other side. Test yourself by going through the flashcards regularly. The act of writing the information down and repeatedly testing yourself helps reinforce your memory. You can also use online flashcard apps to make studying more interactive.

Teach Someone Else

One of the best ways to solidify your understanding and memory of a lesson is to teach it to someone else. Get a study buddy or a sibling, and explain the concepts to them. Teaching forces you to organize your thoughts, clarify concepts, and remember details, and it is also a fun way to study.

Activity

Step 1 Divide teams of 4

Step 2 Write the ideas of memorization like flash cards or mnemonics in chits and let each team pick one chit

Step 3 Let them use the idea they picked to memorize simple topics given.
Example - flash cards can be made for parts of body, mnemonics can be made for solar system or months of year for smaller children etc.

Home assignment

Ask the students to use the above methodology and do the same for any one topic in math and science and bring it in the next class. They must take parents assistance for the same and parents acknowledgement is mandatory.

End of Session
